

程式主要功能：會以10分鐘為間隔一次下載氣象署全臺合成回波圖
藍色圖案是可以依使用需求自行更動的部分

```
1  import subprocess
2  import time
3  import random
4  from pathlib import Path
5
6  env = "windows" # "linux" or "windows"
7  year = "2026"
8  mm = "10" # month
9  dd = "05" # day
10 MM = range(0, 60, 10) # minute
11 HH = range(0, 24, 1) # hour
12 MM = [f"{M:02d}" for M in MM]
13 HH = [f"{H:02d}" for H in HH]
14 picpath = Path("./pic")
15 picpath.mkdir(exist_ok=True, parents=True)
16
17 for H in HH:
18     for M in MM:
19         webpath = f"https://www.cwa.gov.tw/Data/radar/"
20         filename = f"CV1_TW_3600_{year}{mm}{dd}{H}{M}.png"
21         if env == "windows":
22             command = ["powershell", "-Command", "Invoke-WebRequest", "-Uri", f"{webpath}{filename}", "-OutFile", f"{str(picpath / filename)}"]
23         elif env == "linux":
24             command = ["wget", "-P", str(picpath), f"{webpath}{filename}"]
25         subprocess.run(command)
26         time.sleep(1 + random.randrange(50)/100) # don't touch this line
```

都是內建函式庫

選擇你所使用的作業環境

時間
